

Of course, there is nothing wrong with calling distributed tasks either. An example was provided by O'Reilly's articles and written by Drew McCormack May 11, 2004 [?]. This analysis examines the crucial parts.

Apply Filters is the method that calls Distributed Task. There are many nuggets of value in addition to the calls for:

- Add Sub Task with Identifier . This call includes
  1. The identifier
  2. Launch path
  3. Working Directory
  4. Output Directory
  5. Standard Input
  6. Standard Output
- Launch
